HILCO FILTER CARTRIDGES

2021-2022

Gas Coalescer/Separator Cartridges

Designed to remove moisture and particulate contamination from steam and gas turbine lube oils. Self-sufficient stand-alone models with reservoir capacity ranging from 2,000 gallons to 12,000+ gallons and portable models as well as custom designs are available.

Hilsorb

Hilsorb Dryer Filter Cartridges quickly and effectively remove solid and water contaminants from hydraulic, lube and insulating oils. The PD cartridge is made with a patented four-ply construction and is available in two efficiency ratings.

HP Hydraulic Fluid

High-pressure hydraulic cartridges are engineered for 2000 PSI pressure. The ability to withstand high pressure permits placement in the high-pressure circuit to protect sensitive hydraulic components. Contains micro-glass filter media between protective screens.

Liquid Coalescing Cartridges

Hilco coalescing systems are the ideal way to remove moisture contamination in any liquid fuel. Hilco has been manufacturing coalescers for liquid fuels for over twentyfive years.

Microgard Cartridges

Provides reliable, long-life contamination control. These efficient filter cartridges feature three filtration layers: outer cellulose-media layer for coarse filtration, an intermediate glass-media for microfiltration, and an inner cellulose-media layer for added support.

Pleated Synthetic PH

These durable cartridges stand up to continued use without softening and deterioration as a result of exposure to water. The key is an advanced synthetic media that provides maximum filtration with minimum pressure drop.

Safeguard Cartridges

Single-layer pleated paper cartridges are economical for use in applications requiring general filtration. Disposable cartridges feature molded urethane ends on various sizes. Plated metal end caps are also available with controlled radius pleats to maximize usable filtration area.

Selexcorb GT Cartridges

Adsorbent filter cartridge specifically designed for use with phosphate ester fluids. It maintains the original quality of fluids for prolonged periods, thus reducing the need for fluid changeouts and increasing equipment life. These cartridges feature metal ambients for added strength, as well as a polyester media retainer for both chemical resistance and media retention.

Anti-Static Cartridges

HILCO PH-CGJ style filter elements incorporate conductive fibers which are co-pleated in between two layers of high-performance microglass filter media. As a result the HILCO anti-static filter element dissipates static charge build up before discharge can occur. These style elements are available in every standard HILCO media grade code.

Demister Element

At the core of every HILCO® Mist Eliminator is our highly developed Demister Cartridge which utilizes an inside out flow in order to trap the oil from the air stream and return it to the oil reservoir for reuse. The resulting clear air can be safely released to the atmosphere with no environmental impact whatsoever.

Direct Replacement Filter Cartridges

Hilco offers a wide range of drop-in replacement cartridges for most of its competitors including: Pall, Hypro, Hydac, Dollinger, Refilco, NFS, Hycoa, Nugent, Baldwin, Allen, Cuno, Filterdyne, Fluitek, Kaydon, Velcon, Winslow and Western, among others.

AUTHORIZED DISTRIBUTOR OF HILCO PRODUCTS

The reliability and efficiency of any filtration system is chiefly dependent on the quality of the cartridges used in it. HILCO has a full line of filter cartridges for virtually every application depending on size, filtration efficiencies and dirt-holding capacity. Most fluids can be restored to a like-new condition.

HILCO's on-site testing facility is continuously examining and improving cartridge performance as customer's needs evolve. HILCO is a major to supplier to original equipment manufacturers worldwide.
