**FILTRATION
SYSTEMS**

Hilliard's HILCO brings fluid contamination problems under control, cost effectively with our full range of engineered filters, cartridges, reclaimers, coolant recyclers & fluid conditioning systems. We go beyond filters to provide a full service fluids management process, from obtaining samples, to fluid analysis, consulting on equipment, field techs, start up help, and more.

Coalescer Separators

The HILCO Coalescer Separator removes moisture and contamination from steam turbine lube oils which have good water separability and are commonly found in the power generation industry. Other applications may include refineries, chemical plants, heavy industry and steel mills.

Reclaimers

Hilliard reclaimers are ideally suited for reclaiming insulating or refrigeration compressor oils or for any application which requires a high degree of purification. Reclaimers restore contaminated oils to a like-new condition. Dirty oil can be purified and re-used to save on oil costs. Simple to operate, easy to maintain, this system extends fluid life and greatly decreases costs for waste disposal and purchase of new fluids. No matter what degree of purification or type of contaminants your application involves, Hilco has a reclaimer to fit the situation.

Ceramic Membrane

The Ceramic Membrane Filtration System utilizes high-velocity fluid "crossflow" across the face of the membrane. The oil-free water passes through the ceramic membrane while the oily waste is concentrated in a process reservoir.

Portable Filters

HILCO portable filters are an economical solution for removing water and particulate from oils, fuel and other fluids. Filters can be built to ASME Code standards. Hilco portable filters can be used for many different fluids, including: Mineral-based lubricating, hydraulic, and insulating oils Synthetic lubricating and hydraulic (EHC) fluids Fuel oils, kerosene, gasoline Ethylene glycol mixes Solvents Coolants and cutting oils Vacuum pump oils.

Custom Filtration Systems

HILCO's staff of engineers is always willing to design a system for your particular needs. Call today with your specific application requirements.
